

MODEL LASH LIFT INFORMATION

TREATMENT: EYELASH LIFT OR PERM & EYELASH TINT

PROUCTS: ELEEBANA PERMING SOLUTION

ELEEBANA SILICONE RODS

BELMACIL TINT & CRÈME OXYDANT

Thank you for being a model at TMBP on behalf of JAYESABEAUTY.

As a model you will be used to trial new products and techniques. TMBP and JAYESABEAUTY would like to share some information on the products we use. As everyone is different we would like to inform you that “some” allergies can occur as stated in the MSDS (but very rare and very low risk).

Please don't be alarmed we are merely making this information available to you to assist your personal choice of treatment.

1. The lash lift being to dramatic or minimal effect due to using the wrong size silicone rod.
2. Stray or frizzy lashes from the chemical reaction of the product.
3. Skin irritation during and post treatment
4. Skin and Eye allergic reactions

You have the option to ask the technician to take part in a patch test prior to your treatment. Each product will be placed on the skin and left for 10mins to ensure there is no skin irritation or allergic reaction.

You will notify the technician of any allergies or previous reactions and remove all eye contact lenses.

By undergoing this treatment as a model you agree and understand this information.

Product MSDS are available on request.

AFTERCARE

1. Avoid getting your lashes wet for up to 24hrs after treatment
2. Avoid swimming in salt or chlorine water for up to 48hrs after treatment
3. Comb through your lashes with a spoolie to prevent any stray lashes and maintain beautiful long lifted lashes
4. You have the option to use either Vaseline or Coconut Oil to keep your lashes hydrated between treatments. Apply a small amount to the lashes before bed. Avoid getting in your eyes as this can cause irritation or a reaction.
